Ordered by Paymill ( <https://www.paymill.com/> )

Support / Download: soon available on WordPress.org

## known bugs / open tasks

- Payment Gateway for <http://www.magicmembers.com/>
- Shortcode support for Pay Button

## Installation manual

### General Settings

Installation of Paymill Plugin in WordPress is quite easy and could be done without reading this manual. If there are any installation issues or problems while using the plugin, the following manual should clear out some questions.

1. Unzip the plugin archive.
2. Upload the directory „paymill“ to the plugin directory of WordPress.
3. Activate the plugin „Paymill“ in WordPress Adminpanel on „Plugins“ tab.
4. Submit personal API keys and API endpoint address.

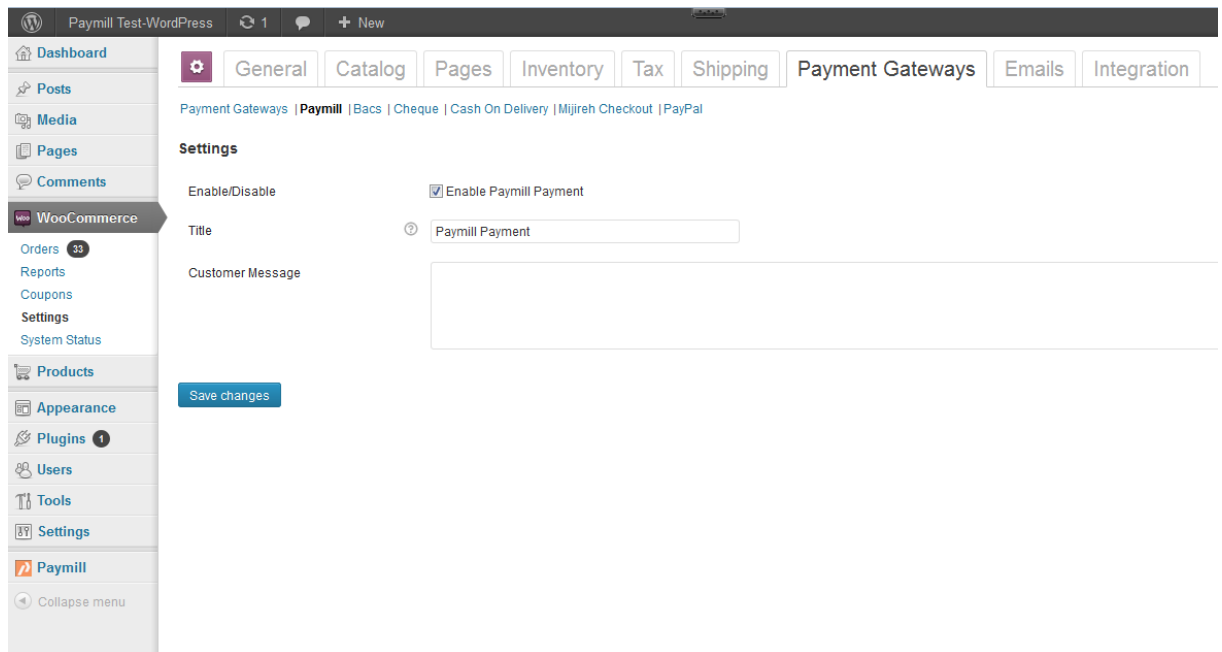

The screenshot shows the WordPress admin dashboard with the Paymill plugin settings page. The left sidebar contains the standard WordPress menu items: Dashboard, Posts, Media, Pages, Comments, WooCommerce, Products, Appearance, Plugins (1), Users, Tools, Settings, and Paymill. The Paymill settings page has two tabs: 'General' and 'Pay Button'. The 'General' tab is active, showing 'General Plugin Settings'. It prompts the user to 'Please insert your API settings here.' and includes three input fields: 'Paymill PRIVATE API key', 'Paymill PUBLIC API key', and 'Paymill API endpoint URL'. The 'Paymill API endpoint URL' field contains the text 'https://api.paymill.com/v2/'. A 'Save Changes' button is located at the bottom of the settings form.

General Plugin Settings	
Please insert your API settings here.	
Paymill PRIVATE API key	Insert your Paymill <b>PRIVATE</b> API key.
Paymill PUBLIC API key	Paymill PUBLIC API key
Paymill API endpoint URL	Paymill API endpoint URL

## WooCommerce

### 1. Activate Paymill Payment WooCommerce -> Settings -> Payment Gateways -> Paymill

That's all 😊 The payment gateway is now available in WooCommerce and ready to use:

The screenshot shows the Paymill payment gateway checkout form. At the top, there are logos for VISA, V PAY, MasterCard, Maestro, and ELV. The form has a 'Name' field. Below it is a 'Credit Card' button. The 'Credit Card Number' field is followed by the 'CVC' field. The 'Expire Date (MM/YYYY)' field is split into two boxes for month and year. At the bottom, there are radio buttons for 'Direct Bank Transfer' and 'PayPal' (with a PayPal logo). A 'Place order' button is at the bottom right.

## Pay Button

*The Pay Button is a simple, independent feature which allows product sales without overloading features. Please note that we can not compete with full eCommerce Solutions. You may extend the Pay Button with own custom features. Additionally, you may consider hiring the plugin author if there is a demand for a customization.*

1. You may start with the common settings in WordPress ACP -> Paymill -> Pay Button. You can toggle the settings with a click on „Toggle View“.

2. You can setup unlimited products. Please note that only those products will be listed in widget which have a title set. The products list starts with 5 slots and extends after you've set and saved the last product title in that list.

3. To allow different shipping pricings, you are able to add unlimited shipping destinations.

4. Activate the widget by moving it to your sidebar. Please note that you'll not be able to load more than one Paymill form on the same page.
5. You may customize the widget via CSS. All HTML elements have appropriate CSS classes and IDs.

## **Shopplugin**

1. Copy the directory “shopp” from paymill-plugin-director via FTP into “wp-content/plugins” of WordPress. Paymill will appear as payment gateway within shopplugin admin control panel.

### *Troubleshooting*

If not done yet, the TEST API Keys should be replaced with LIVE API Keys within Paymill admin panel of WordPress.

### *Translation*

The plugins uses translation feature of WordPress. The language files can be found at `paymill/lib/translate/`
